

one-stop destination for everything starting from shopping to games, you might as well utilise it for learning purposes. There are thousands of great institutions that operate online, in case you do not want to go into the hassles of taking offline courses. Online courses are not only cheaper, but they can also be customised to suit your own pace. That said, software testing is an elaborate subject that might take you some time to learn and capture. Being enrolled in a course will help you streamline your learning procedure while still being able to continue with your daily tasks. Moreover, online courses give you a certificate that you can show on your resume. That is the proof of your merit as a software testing engineer.

- 4. Books (free and otherwise):** Books are some of the best ways to learn more about software testing. While most of the above points were suitable for beginners, books work brilliantly for all kinds of software testing professionals. If you are a beginner, you can use books to learn more and more about software testing. If you are already working as a software testing engineer, you can use these books as a reference to find a way to do things faster, more efficiently, or simply to slip out of a tricky problem. If, on the other hand, you have advanced software testing skills, you can use the same books just before you train the ones under your supervision.
- 5. Mentors:** Mentors in the industry are yet another bonus if you are trying to master the skills of software testing. Courses, tutorials, webinars work well to teach you the basics, but the real deal has to be learned from someone with experience. This person can be a senior in your office, maybe a senior working for some other company, or such other people who have extensive knowledge or expertise in this area. They can teach you hacks and pour into your head the knowledge that they have acquired throughout the years. A mentor makes things easier for you to learn. But more importantly, you imbibe the industry secrets and efficient procedures from watching them work.
- 6. Google:** Google is probably the most resourceful of all things in the world. Knowing how to Google well is sure to give you a head start in any area. As for software testing, Google plays a bigger role. You can not only use Google to learn more about the subject, but you can use the platform, and the millions of other organisations that thrive on Google, to find solutions to a typically hard issue related to software testing.
