

Setting up Django

Setting up Django the right way before getting started

Before getting started with the Python framework Django, we must first successfully install Django. For that to happen, follow this comprehensive guide to ensure proper installation of Django. The guide will explain the fundamentals of the framework through the installation process and then take you through your very first project on Django.

Let's get started

There are a few required packages that must be installed before starting Django. The most fundamental requirement is Python, so make sure
