

whatsoever, the server does not run, type the following command (run as per your operating system):

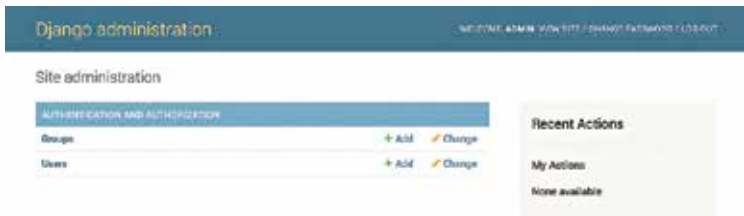

Now, open a Web browser on your system. Go to the – “.../admin/...” on your system’s local domain. It can be for example – <http://127.0.0.1:8000/admin/>. You will see an Admin’s login page on the local domain similar to displayed in the image here >.

Translations are by default open, but if you have set ‘LANGUAGE_CODE’, then on the login screen, you will see your own language settings.

3. Entering into the admin site

Now, you have the superuser account that you created in the earlier step. Log in through this. Here, you will see the Django admin index page.

Here are a few types of editable content for a few groups and some users. These are provided by ‘django.contrib.auth’. This is a shipment by Django. It is an authentication framework.
