

-
- `{% block content %}`
- `{# Hero Section #}`
- `{# Main Section #}`
- `{% endblock content %}`

Line 1: The first block extending the base.html file is defined.

Line 2: The second block overrides the default value and presets the title element value to 'Home'. Look at the `{% block title %}` tag created previously for a better idea.

Line 3: This block sets the nav-style value. It is used to add the name of a CSS class to the nav-bar element. This value applies to a class that changes the styling.

Lines 5 to 11: This is the last block that allows us to enter the main content of the page.

ii. Create the Home Page Hero Text

For adding the hero text, or banner to the web page, locate the `{# Hero Section #}` comment and add this code after it.

- `{# Hero Section #}`
- `<div class="mkt-sl">`
- `<div class="mkt-sl-body container ">`
- `<div class="row">`
- `<h1 class="col-md-8">Never Miss Another`
- `Opportunity</h1>`
- `</div>`
- `<div class="row">`
- `<p class="col-md-8">A CRM application for`
- `tracking`
- `customers, meetings, and notes. </p>`
- `</div>`
- `<div class="row">`
- `{# First Signup Link #}`
- `<a href=""`
- `class="sign-up btn btn-success">Sign Up Now`
- `for $15/month!`
- `</a>`
- `</div>`
- `</div>`
- `</div>`
