

Forms and Generic Views

Forms and Generic Views are important concepts in the Django framework. In this section, we will discuss the nitty-gritty of both and get a fair idea of how they work.

Forms in Django

What are Forms in Django?

Forms in Django can be defined as an advanced set of HTML forms that can run in the Python environment. The process of creating a form in Django is similar to the process of creating a model. The developer needs to specify the fields that are required in the form and the data type of those fields.
