

```

• class Author(models.Model):
•     first_name = models.CharField(max_length=100)
•     last_name = models.CharField(max_length=100)
•     date_of_birth = models.DateField(null=True,
blank=True)
•     date_of_death = models.DateField('Died', null=True,
blank=True)
•
•     def get_absolute_url(self):
•         return reverse('author-detail', args=[str(self.
id)])
•
•     def __str__(self):
•         return f'{self.last_name}, {self.first_name}'

```

Now open the root directory, and replace all the existing code with the ones given below.

```

• from django.test import TestCase
•
• from catalog.models import Author
•
• class AuthorModelTest(TestCase):
•     @classmethod
•     def setUpTestData(cls):
•         # Set up non-modified objects used by all test
methods
•         Author.objects.create(first_name='Big', last_
name='Bob')
•
•     def test_first_name_label(self):
•         author = Author.objects.get(id=1)
•         field_label = author._meta.get_field('first_
name').verbose_name
•         self.assertEqual(field_label, 'first name')
•
•     def test_date_of_death_label(self):
•         author=Author.objects.get(id=1)
•         field_label = author._meta.get_field('date_of _

```
