

you are looking to become an expert without much hassles, this is the one you must take up.

4. **Django OverIQ:** Django OverIQ is a little different from the tutorials mentioned above. This one helps you become a pro by assisting you in projects. The learning here is completely based on application, whereby you learn all about the framework through hands-on experience. Hence, if you are looking to learn Django for a professional reason, this is the best suitable tutorial for you.
5. **Django Subreddit:** The Django subreddit, although not a tutorial or a book, is one of the most important resources in learning all about the framework. Here, you will find links to reputed books and great tutorials to help you enhance your knowledge about Django.

Prerequisites for a Django web framework project

As easy as it sounds to learn and use Django, it is can get a tad bit too complicated if you do not know the basics. When we say 'basics', we mean, the prerequisites. Django is not as demanding as some other frameworks tend to be. In fact, it requires you to know a few basic concepts that you are anyway supposed to know if you are a programmer and/or a web developer.

In case you are still starting up, refer to the list below to understand what you must learn first to understand Django better.

1. **Python:** Python is at the base of Django and that is what makes it absolutely necessary to know before you venture to learn Django. The good news is, Python is the easiest programming language. It is uncomplicated and the semantics makes it all the more easier to code.
2. **HTML:** HTML is the basis for web development. Hence, knowing this is absolutely essential if you are trying to build a website, and subsequently, wish to use Django as a framework there. HTML, or Hyper Text Markup Language, is the high level markup language that is used to create a website. Coupled with frameworks like Django, HTML becomes one of the most powerful tools in your hands.
3. **Basic web development knowledge:** A basic knowledge of web development is very important if you wish to learn Django. Apart from HTML, you must also know how to use CSS, and other scripts like JavaScript and JQuery. It is not always mandatory to be a maestro in web development, but it is always recommended to become an expert at it before you take on Django.
