

use formulae to compile data and get results.

- **OneDrive:** It is a cloud-based application that stores data online.
- **Publisher:** This application helps create extensive publications, menus, posters and much more.
- **Outlook:** It is an electronic mailing application that manages email, calendars, to-do lists and contacts.
- **Access:** It helps users to compile and manage a large amount of data in one place.

These applications are designed to work together seamlessly. A user can use a combination of apps together to complete a task.

The new features of Microsoft Office since 2018

1. Scalable Vector Graphics

Now, users can add Scalable Vector Graphics (SVG) into Excel, Word, and PowerPoint files. These graphics can be easily rotated, moved and resized without degrading the quality of the image.

2. Microsoft Translator built-in support

Microsoft Translator is a new feature added to Word, Excel and PowerPoint. This feature helps translate the entire document or selection portion of the text.

3. LaTeX Equations in Word

LaTeX equations help users to type math formulas in Word. You'll find this feature under the Design tab.

4. Morph for animation and motion

PowerPoint has been used to make impressive presentations for years now. A new transition feature called Morph has been added to PowerPoint. It allows users to add a smooth movement between one slide to the next slide. It creates animation in seconds.

5. Zoom Navigation in PowerPoint

Zoom feature provides easy navigation in PowerPoint slides. It creates thumbnails for all the slides on one single page. The user can click on the thumbnail, and the slide will open.

6. Excel Functions

Six new functions have been added to Microsoft Excel – CONCAT, IFS,
