

its Black theme, which is by far its highest-contrast Office theme till date. Once you opt for a particular theme, you will notice that it will be put to use across all of your Microsoft Office apps.

No language barrier

With the help of Microsoft Translator a user can translate any number of words, phrases and sentences to a language that is best aligned with their personal convenience or one that suits their project requirements best. This feature can be availed from Review tab in Excel that is found in ribbon.

Saving CSV file

In its previous editions, Excel used to prompt a warning dialogue box for its users whenever they attempted to save an arbitrary CSV file. However, many users considered this particular feature to be fairly unnecessary and thus upon persistent requests, Excel 2019 has now done away with this. No warning dialogue box will pop up on your screen now when you attempt to save any CSV file in Excel 2019.

UTF-8 support

This feature has also come into existence courtesy user requests that were issued on Microsoft's Excel User Voice forum. As a result, users can now successfully view and save CSV files which consist of UTF-8 character encoding. A file format in common use, CSV UTF-8 supports a higher number of characters than Excel's existing CSV (ANSI) option. This essentially translates to users now getting better support for all of their data that is non-English in nature. Subsequently it also makes way for improved ease of moving data to other applications.

Excel DLP

As a high value enterprise attribute, Data Loss Protection (DLP) is highly appreciated in Outlook. On the basis of that, Microsoft has introduced it in Excel as well with a vision to facilitate real time scrutiny of content that is based on predefined policies, for those data types that are known for
