

The first version of Microsoft PowerPoint came out in 1987. It was only included in the Microsoft Office Suite in 1995, with version 7.0. It was here that the juggernaut that is PowerPoint first gathered force. The first version of PowerPoint for mobile devices appeared in 2005, with PowerPoint Mobile for the Windows Phone 5. The PowerPoint Web App made its debut in 2010 with version 14.0, and PowerPoint for Android and iOS came in 2013 with version 15.0. Powerpoint 2019 is the 16th version of PowerPoint, released in late 2018, more than 30 years after its conception and first release.

Among the presentation software of the world, PowerPoint holds a market share of more than 95 per cent. Still, this has not stopped Microsoft from coming up with new major upgrades with each new version, and each new update of PowerPoint. PowerPoint 2019, apart from its characteristic features, is packed with several such upgrades from the previous version.

Here is a guide through all that is new in PowerPoint 2019.

1. Morph transition:

There are very few ways to describe Morph transition, other than as yet another significant step in bringing your PowerPoint presentation closer to video quality. The morph transition capability has all the makings of one of the best transition options that was hitherto available only on advanced video editors. What morph transition does is that it allows for a change from one slide to another in such a way that it seems like the first is morphing into the second. The transition is extremely smooth and is bound to appeal to you if you are a fan of using animations and transitions
