

slides, you can go back to the landing page and move on to the next section, regardless of the order it appears in. The Section Zoom allows you to go to any particular section in your presentation, or even go back or forward to sections to emphasise your point. A caveat is that you must have divided your presentation into sections beforehand. The Slide Zoom is a pane in your slide show which allows you to move back and forward to particular slides without having to necessarily exit the slideshow.

3. Text highlighter:

Not many users noticed when the text highlighter in PowerPoint suddenly went missing in the previous few years. The highlight text in PowerPoint isn't popular as it isn't the most appealing element of a slide. However, it does seem like there were enough users of the highlight feature, causing Microsoft to bring it back in the 2019 version of PowerPoint. You can choose which colour you want to highlight text in. The Text Highlighter button is present on the Home tab. The colour of the highlighter can be changed by clicking on the arrow next to the Text Highlighter button and choosing the colour of your choice. You can also choose the No Color option if you wish to remove the highlight from a piece of text on your slide.

4. Vector graphics:

This has been one of the most awaited updates to PowerPoint on the media side. The fact that SVG files were incompatible with previous versions of Office was a cause of much chagrin to users, especially those of PowerPoint. This is because scalable vector graphic files do not lose their quality when their size is increased or decreased. SVG pictures are particularly useful when you wish to show diagrams, flowcharts or infographics. In most other formats, these graphics will show decreased quality as soon as they are maximised beyond their default size. You can now insert SVG files into PowerPoint by accessing the Insert tab and clicking on the Pictures option. As will be evident from the next update in this list, SVG images can
