

exporting data to the dBASE multiple file formats. Here, users must select the External Database and choose a file to export data to a particular location.

Property sheet sorting

Ease of property sorting empowers users to reach a specific property on the property sheet. Especially for professionals handling a large amount of data within the reports and forms, this sorting allows them to arrange the list in alphabetical order. And when you know the name of the property, this gives you easy reach to find the exact answer accordingly.

How to sort the property sheet?

Open the file and go to the property sheet. In the design mode for the forms and reports, locate the toggle button on the top right corner. Users have multiple options for default settings, unsorted, and listing the properties to check with the Access configurations. Here is a quick presentation and their corresponding toggle button for sorting the property sheet:

The figure represents the sorted list on click alphabetically, and the re-click restores it to default settings.

Label name property for controls

In this MS access 2019 update, a new property for controls is introduced as Label Name. This label name property empowers users to associate a specific label control to secondary control. The whole association process enhances accessibility as integrated technologies use this information to give combined results and optimise the solutions.
