

- In the Lookup or Combo box, users have the privilege to check the availability of multiple columns for recognizing, reading, and evaluation.
- For the dialog box, users can view an added option group name with the corresponding option state to read, view, and modify.
- For the datasheet column, a filter menu arrow icon is now visible, recognizable, and readable.
- An enhanced experience for narration and similar assistive technology while performing a control within the form section on focus.
- For the Windows Narrator scan mode, users can use Left Arrow or Right Arrow to move through the radio buttons and then press Enter or Space to enjoy a toggle experience.
- More options for control elements in the Narrator and assistive technology with optimised checkbox controls, tab controls, reports, attachments, datasheets, and reports, respectively.
- While in the narrator and corresponding technology mode users can enjoy an optimised reading experience throughout the column names across forms, datasheets, and reports.
- Bring a new table into view with the keyboard shortcut of Alt+H. Press Q for viewing the filter menu inside the table column, and with the FD button, you can work with the Find and Replace dialog box.
- New keyboard shortcuts with F6 and Shift+F6 that work across all the sections in the Access popup forms.

For the high contrast mode in the window, these modifications provide better optimised performance.

- Adding a filter button on the top navigation bar on the form or at the datasheet empowers direct access to the user.
- Presence of additional Saved Imports tab on the Manage Data Tasks dialog box to empower users for better editing and enhancements.

Forms and reports are now visible in the High Contrast mode in different sections of column headers, focus cells, and several themed command button controls.

Easier editing for new value list items with a new keyboard shortcut

Yes, with the Access 2019 update, you get a new keyboard shortcut that empowers users to edit list items in the dialog box on the Access form while working in combination with value list combo boxes.
