Tell Me box enhancements

With the MS Access 2019 update, users also get significant improvements in the Tell Me box with optimised search, content, and recommendation to solve your queries with more precision and higher productivity. And once the user inputs their query in the search box, there will be plenty of options.

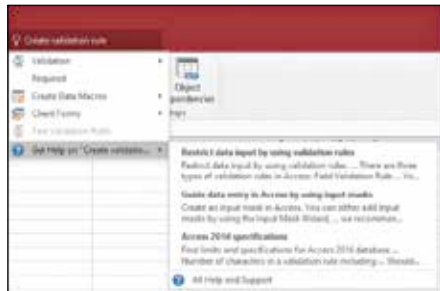

Figure: Tell Me box improvements

For quick tasks, Access offers the Tell Me pane to get the right solutions for you. For more complex queries, Access will attempt to fetch the most ideal match in their results. You can test these options to get what you want and provide a quicker solution right away!

Easier resizing windows

Users often found it difficult to resize table objects via the Query design and relationship. Now, an improved clickable area on the window border, makes it easy for the mouse to make changes and optimise the window to ideal size. Users can grab the window border at their will and modify to resize tables in matching with the specific requirements.

Users also had the same difficulty in controlling and moving the Access popup forms with the mouse. But with improved border areas, users get
