

easier border areas by using the mouse to control the window size. In both situations, users will feel a better experience in managing multiple windows in resizing them to manage them precisely.

## Navigation pane scrolling improvements

Users also gave feedback and brought attention to scrolling in the Navigation pane through the list of objects, especially in the high DPI display mode, with their unusual behavior. You will get the best user experience in Access 2019 with no scrolling bumps during the use of Navigation Pane via higher DPI display modes.

## Conclusion

Overall, MS Access is a reliable, trusted, and powerful database management system. MS Access has the capability to store all forms of database tables, forms, macros, modules, queries, reports, and more within a single file using the Access Jet database, especially for data architects, software developers, and IT power users who use MS Access in their daily operations. You can enjoy the trial with unlimited features and then subscribe as per individual or business requirements.

Microsoft Access is one of the essential utilities of the Microsoft Office software package. With these newly added features, the MS Access 2019 update offers incredible choices, accessibility, visualisation, and control of various aspects of data management. MS Access does not have a web version after the support was taken off in 2018. But, with the MS Access Desktop version and standalone software users get a more optimised performance.
