

- **Timeline-** This provides an overview of the entire project. It is usually a graphical view that elaborates the start and the finish of the project.
- **Sheet-** Just like spreadsheets, Sheets display the project data. Its default fields also alter depending upon the type of the Ribbon tab that you are working in.
- **Chart-** Chart refers to the graphical depiction of the data on the sheet. Depending upon the Ribbon tab or view, you can see a chart highlighting the duration of the project task.

Additional features

Link tasks using the dropdown menu

This is one of the most astonishing features in Project 2019, where you do not have to recognise the ID of the tasks that you are willing to link to. Rather, whenever you select a task in the predecessor column, and then select the down arrow, a list of all the tasks related to your project will appear. The task list hierarchy in this order exactly matches your project, and will make it convenient for you to scroll down to the accurate task and select the check box beside.

Task summary name

The Task Summary Name is a read-only field that represents the name of the 'summary task' of each task. Adding the Summary Name field in the column can help users to clarify their project structure.
