

- **New wireframe - website and mobile app template**

The new version of Visio has a new template for mobile and web applications. The templates are present in the database and software category. The mobile app templates are compatible with all mobile designs and can be used to design the wireframes for mobile applications.

- **UML Tools**

New UML tools are designed and integrated with Visio 2019. The new features for UML tools are UML component diagrams, UML communication diagrams, and deployment diagrams. They can be used to represent all steps involved in UML designing that include component, communication, and deployment process representation.

- **Slide snippets**

Now you can directly import the designed snippets to PowerPoint through Visio 19. The compatible version of PowerPoint with Visio 19 is version 13 or above.

- **Some additional features**

Apart from the design representation, the Visio 19 application by Microsoft also offers other features like:

1. Real-time indicators to represent real-time presence
2. Highly secure and simple sharing features
3. Sharing option
4. The facility of commenting within the app
5. Simultaneous option to edit the information

- **Visio Viewer**

For Microsoft Edge and Explorer browsers, Visio Viewer is an add-on. The users of these browsers can easily view the diagrams without any additional application or plug-in installation.

In this way, Visio 19 users can get several advanced features to design their apps. Both versions of Visio 2019, standard and professional, can be accessed or downloaded easily. In the following section, we are going to discuss how.

How to get Visio 2019?

Visio 2019 can either be downloaded from its site or any other third party vendor. There are many versions available for Visio 2019. You can easily
