

has been designed, keeping in mind the collaborative needs at the workplace. It is a feature-rich application some of you may need and some you may not. Either way, Microsoft Teams is your trusted partner for group projects.

Org-wide teams

Apart from public and private teams, it also has org-wide teams. It can provide an automatic way for all individuals to become a part of a single team for collaboration. All the global admins will be added whenever you create an org-wide team. It will also add team owners and active users as team members. It will not be possible for team members to leave an org-wide team. On the other hand, a team owner can remove and add users manually. Small and medium-sized organizations constitute the outer loop, which has been defined by Microsoft as Yammer. The org-wide teams can replace it. Mentioned below are some of the best practices that have been released by Microsoft for dealing effectively with org-wide teams in Microsoft Teams.

- Permit team owners when it comes down to submitting posts in the General channel
- Switching off @[team name] and @team mentions
- Automatically favourite important channels
- Remove accounts which may not belong

Immersive readers

Microsoft Teams is now equipped with an immersive reader that will let physically challenged people view, hear, and translate individual messages easily. It will also provide text enlargement for filling the entire window. You also have the provision of using a screen reader where the computer will read the message in a synthesized voice in the language of your choice.

Moreover, by enabling the picture dictionary, the feature will be translating every single word into text. It will make things easier for you, letting disabled persons and students comprehend the text used in the conversation. As of today, it can only deal with English text. Hopefully, more languages will be added soon.

Built-in translator

Nowadays, due to the extensive use of smartphones and Cloud technology, enterprises are opting for geographically distributed big teams. It helps in neutralizing geographical and physical barriers, which optimises productivity. In contemporary times, enterprises have content core teams whose
