

Private or standard channels

Every member of the team will have access to the standard channel. However, if you are faced with the need for a smaller specific audience on a subject, then you always have the option of using a private channel.

Bots gallery

To help you in increasing productivity there are around 24 bots with different functionalities. Here, you have the T-Bot, which allows you to answer the most basic FAQ about teams. Then you have the Polly Bot for polling co-workers, Statsbot to deliver reports through sources like Growbot, Google Analytics, and Salesforce. It will permit the exchange of kudos with your co-workers.

Integration between Teams and Outlook

February 2020 witnessed the induction of an integrated experience between Outlook and Teams. Microsoft is well aware that although Teams is a useful application for collaborating this tool is not going to be a substitute for conventional online collaboration tools like email. Hence, they have ensured that the relationship between Outlook and Teams remains seamless with the provided functionality of moving teams' conversation to Outlook. All it takes is a click on the three-dotted icons, which stands for more options. Moreover, it has also incorporated a feature of moving the conversation from Outlook to Teams, including attachments. All you need to do is click "Share to Teams". At present, this feature is only available for desktops, and not in mobile applications.

Managing app catalogue

Through the Manage Apps page, it is now possible for admins to manage apps right from the Microsoft Teams admin centre. It paves the way for administrators to view all of the available apps in the tenant, apart from providing information for assisting decisions surrounding the choice of apps that best suits the organisation. The app catalogue is also capable of providing admins with the ability to streamline the distribution and testing line of the business applications process.

Teams new file experience

The file handling in the Microsoft Teams is now powered by SharePoint, which has been rolled out online to all the tenants. Now, it will be possible for you
