

Through Shifts, you can keep track of working hours daily, per session, or even per hour. It can then be used and verified by the employer. It helps to instill transparency in work time recording, work schedule, and payment management. Being a transparent system of recording timesheets, it permits an organization to develop a healthy work culture among management and employees.

Collaboration across SharePoint sites

By now, it has become quite evident that Microsoft Teams is a capable tool rendering the ability to work with multiple services and applications. An organization can use Teams for facilitating an easy connection with all SharePoint's sites across the organization. Microsoft Teams has the provision of sharing pages, documents, and embedded files across SharePoint. It is even possible to integrate complete SharePoint's sites to Teams.

Teams also offers feature sets like combining company information sites, email management, knowledge sharing, security, and privacy handling. Microsoft has taken due care of seamlessly integrating new features into Teams, making it one of the most effective applications for collaborating.

Conclusion

Microsoft Teams is an assembly of useful features that immensely helps organisational teams to collaborate, transcending physical and geographical barriers. In short, Microsoft Teams provides a huge benefit for workplaces that are already working on Office 365. It addresses all of your collaborative needs with ease. The product has the capability to address the varied needs of collaboration across all professions and age groups. In the face of a global pandemic where people are compelled to stay indoors and work from home, Microsoft Teams proves to be an invaluable tool for collaborating.
