

platforms and devices. The protection is also extended to third party services, even if those services do not support sensitivity labels.

Some Useful features

There are a few minor features that make the experience of working together better but are too short to get their own points.

Those are:

1. Know who is working on a document: You will have access to who is working along with you, and where they are on a document, presentation, or spreadsheet.
2. Join meetings without a hitch: The calendar is pinned to the To-Do pane. You can join any meeting without leaving the inbox.
3. Drag emails to share them with a group: Drag and shuffle around your emails effortlessly. The messages you drag to a group will be shared with all group members.

Conclusion

A team is a group of people coming together to work towards a shared vision. Microsoft Teams helps teams to collaborate and work effortlessly across platforms and devices. Even outside help that is sometimes taken by organisations can be accommodated by Teams. The main objective is to arm a team with the appropriate arsenal for a shared purpose.

There are a lot of features that have been introduced for Teams. These features, when skillfully applied, can prove quite handy for organisations. Microsoft Teams extends the capability of a team by creating a synchronised atmosphere. On a single interface, participants can chat, video call, and work together on familiar office apps in real-time. **d**
