

When you begin setting up the eye, you can consider switching the editing pane to object editing mode within the Adobe Animate environment. This allows you to explore multiple editing options while all your edits happen entirely inside one layer — this is a comfortable (and stable) way of editing parts of your design without affecting any of the other layers even by accident.

Once you select the Oval tool, it is easy to click, hold, and drag your cursor on the canvas to render a basic shape with the fill color you've chosen (black in this example). After the shape has been generated, click on it, and use the Free transform tool (from the right pane) to adjust its size and shape. The Free transform tool is marked with an arrow and a dotted rectangle on the editing tool pane. Use this tool to scale your oval shape down to a point where it matches the proportions of the face that you created earlier. The next step is to place this “eye” at a relevant position on the face and

Drawing the eyes of a cartoon character on Adobe Animate - Using the Oval Tool

then to duplicate the same shape (to create the second eye). Duplicating the eye can be achieved by holding down the “Shift” and “Alt” keys on the keyboard while clicking and dragging the eye shape. This creates a copy of the exact same object.

The last step in setting up the eyes is to align both the oval shapes in a way that they match the facial geometry of the character that you have in mind and are trying to draw. Holding down the [Shift] and [Alt] keys
