

Creating the tongue of your cartoon character on Adobe Animate

The result is a simple and sparkly tongue for the cartoon. This completes the basic facial features before you can move on the rest of the body.

Enhanced character features – How to draw hair for your cartoon character on Adobe Animate

After the face, eyes, mouth, teeth, and tongue, the next logical feature for your cartoon character (and inarguably one of the most important defining elements for any character) is the hair. If you're someone that has played around with the creation of avatars on social networks, you already know the difference that a particular hairstyle can make on any character.

In fact, an easy hack to create multiple (seemingly unique) versions of the same baseline character is to retain all the basic shapes such as the face, the teeth, the skin tone, etc., and to just change the shape and color of the hair. This usually gives an entirely new look even to redundant characters.

In order to draw hair for your cartoon character, you will need to use a combination of the oval shape tool, the object editing mode, as well as the “snap to object” feature (this can be enabled by clicking at the bottom of the editing tools pane).

First, select a suitable fill color for the hair. Once again, in keeping with our selection of the fill colors for the face (pale yellow) and the mouth/tongue (red/pink), it is safe to select brown as the primary hair color. So
