

and [Alt] to create duplicates of the “cut” shape and placing them in varying shapes and sizes on the forehead.

Once you have created the necessary number of “bangs” or cuts on the hair, it is time to create the ears. To do this, select the same color tone that you had used for the face, and draw smaller circles and place them on either side of the face. You can create one ear first and then use the [Shift] + [Alt] duplication method to create a horizontally aligned duplicate of the ear.

Now that you have the basic shape of the face ready, you need to add the “back” of the hair to your cartoon. To do this, drop a “Rectangle Primitive Object” which:

- a) Matches the shape of the original “face” object
- b) Matches the curvature of the original “face” object
- c) Matches the fill color of the original “hair” object

Create this object and use the Free transform tool to place this object on top of the face in a way that it appears only slightly bigger than the overall shape of the face. The resulting image on your canvas should look like this:

Drawing the back of the head of your cartoon character on Adobe Animate - I

After you’ve dropped the back of the hair on the canvas, you need to click on this object and head to the “Modify” menu on the top navigation and move this object to the back. This pushes the “back of the hair” layer to the bottom, making the face visible on top of everything, and the resulting image will look like this:
