

character, get her to wear clothes that match the tone of her face, create arms, hands, legs, shoes, etc. to give her a complete “wardrobe.” Create a rectangular “neck” that matches the skin tone of your cartoon as a segue between the face and the wardrobe.

The next step to achieve the wardrobe look is to create a “T-Shirt” that will house the arms and any design that you want to put on top of the T-Shirt. In this tutorial, we are going to use a combination of primitive rectangle objects, and cut them out (in the object editing mode), duplicate them, and align them using the free-transform-tool to get a resulting image that looks like this:

To do this, first, choose an appropriate color for the clothing (we have selected a deep shade of pink for the main t-shirt and a deeper shade of pink for the “arms” of the t-shirt). Refine the edges of the T-shirt to create the appropriate curvature of the main “t-shirt body” and then add smaller patches of the same object with a deeper fill color, matching the curvature of the hair for the best effect. This will represent one “arm” of the t-shirt. Then, use [Shift] + [Alt] to replicate this “t-shirt arm” and align it on the other side.

A “skirt” can then be created (for male characters, this feature would ideally be replaced by a pair of shorts, separated from the top part of the attire with the belt - you get the idea!) using the same tools, keeping in mind that the color tone of the skirt should be slightly different from that of the t-shirt, for ideal contrast. The resulting image of your wardrobe, with a skirt, should look like this:

Adding a skirt to your cartoon character on Adobe Animate
