

- Apply Skeleton helps you to rig partly mapped rigs. Animate alerts you if you try to implement a partly mapped rig. You can apply it anyway, but the rig and motion will be unfinished.
- After your mapping is complete, you can click Apply Skeleton to create bones and its links on your character.
- When the motion check box is chosen, you can see the motion of the character in the timeline as well.

Apart from animate, there are many other apps where you can animate characters and do rigging. You can use apps such as Maya, 3ds, Blender, Cinema 4D and many more.

Transitioning to SMR

SMR stands for Smart Magnet Rigs. The first inventors of these rigs were the Electric Dog team in 2013. Since then, many studios and freelance/independent animators adopted this approach to efficiently control and add flexibility to a character they are animating.

Smart Magnet Rigs

With chain selection, magnetic joints, touch up of arcs, SMR is notable with Flash or Adobe Animate landscape. The team of EDAP Tools is currently working and extending the scope of SMR toolset combining traits and tools that enhance the animation as well as manage the compatibility with previous files.

EDAP and Smart Magnet Rigs tools are compatible with Animate and Flash that gives these apps power, flexibility and new features to animators who don't want to move to Animate and the monthly subscription system.

On the final step of rig creation, you can draw several features like redesigning the eyes, creating phases for eyes and phases for eyebrows. You
