

Using Smart Magnet Rigs

Transform, instantaneous reassembly of parts that have been dislocated accidentally by making use of Smart Magnet Joint, interactive posing with KineFlex, as well as by managing an automatic clean up of tweens alongside arcs by employing the Clean Up tool.

Rigging characters using Layer Parenting

In one of the most recently rolled out updates, users can now avail the layer parenting feature in order to enhance

Layer Parenting in Adobe Animate

their character rigging process. It accords the following benefits to a creator:

- The layer parenting feature allows users to connect individual parts of their character by making use of an uncomplicated parent-child hierarchy
- Replace any particular part that they wish to at any point in time
- Reparent any object that they wish to at any point of time
- Modify any arbitrary shape by implementing any tool, including the asset wrap tool as well.

Conclusion

Even though the process of rigging a character body is a fairly time consuming one, budding animators and creators should not shy away from investing ample time while defining the various character rigs that their
