

2. The sound will now split into two streams, which will be indicated by the presence of a new keyframe at the point where you have decided to separate. Insert a new Keyframe just behind the keyframe where you have split the audio.

Create the right eye actions within minutes

3. Now, take the keyframe, which contains half of the audio, and a gap will be created between the split.
4. The audio will play until it reaches the empty keyframe, where it will now pause. As the Play-Head reaches the next keyframe with the split audio, the sound will resume.

Adding sound to layers

To add sound to layers, you need to import a sound clip into the project library, similar to the project library in After Effects or Adobe Premiere.
