

4. To play the sound correctly, you must set a file duration, Therefore at the required point of the timeline, for example, 40 frames, insert a frame by clicking on the photo frame and choose insert-frame.
5. You will notice that Animate hasn't inserted the audio file on the Timeline and is represented on the layer in the form of a waveform image.

With Steam's sound synchronization, you can scrub the sounds by dragging the play head over the file.

At times you may also need to review a sound waveform. For example, when you want to animate a soundtrack and therefore specific points on the timeline. To increase the height of a layer, context-click the layer and
