

You can name the mouth positions and help you remember the area on which you are working.

- You can pick up a particular label present on the lower left side of the timeline and change it as required.

Get the perfect animation

- If you look to match the sound to the animation, head to the required frame > select the mouth to get the object properties, and then click on the lip sync button.
- You can select a neutral mouth and then a corresponding mouth from the popup panel. Make the same for A, T, O, R, Sh, E, and O sounds. Make sure Adobe Animate picks the correct layer, which creates the audio, and picks keyframes for different mouth positions. The pop box for mouth positions has the automatic sync with the audio feature, which you can use to see whether the audio has synced with the animation or not.
- In this way, you can use graphic symbols and use the frame selector to create a beautiful lip syncing animation.

Conclusion

Adobe Animate is a premiere application to create expressive animation as well as interactive content. It enables publication on multiple platforms such as Flash player and AIR, WebGL, HTML5, and even custom platforms to
