In July 2019, Fortnite launched a crossover with the Netflix series *Stranger Things*. Locations from the series were added to the game world, and players were able to unlock avatar skins based on characters. The following month, a similar event was held in Fortnite to celebrate the launch of *Borderlands 3*. We can expect to see more gaming IP finding its way into film and television shows, along with more unexpected crossovers in other games. Sony Interactive launched PlayStation Productions, which is responsible for bringing Sony's video game properties to other screen mediums.

As IP crosses over to other media services and gaming platforms, gamers will be increasingly drawn to mobile games with IP content, which paves the way for franchises and mobile game brands.

Personal Connections and Value

Game developers can determine value in their games by balancing item supply, drop rates, and time or resources to complete a level. Since only a small percentage of mobile gamers make a purchase and games-as-a-service is here to stay, it's increasingly important to understand what players value, and consider how the entire game experience, from design to monetisation and marketing live streaming, adds value.

When looking at the top reasons why gamers make a purchase, their decision is driven by a deeper connection. If the purchase fails to provide the player with the value they've anticipated, the shortfall prompts an immediate reaction of regret. 80 per cent of players who have felt post-purchase regret
