

Brands should be evaluating their target segment and monetization strategies and balancing them with the spending power of emerging markets. Cultural nuances and localization should also be considered in order to appeal to new audiences. Cross-platform gameplay and cloud gaming platforms will help these brands reach a larger section of the gaming community in emerging markets.

Of the 100 billion watch-time hours of YouTube gaming, 10 billion were part of YouTube Gaming livestreams, which signals a strong competition for Twitch.

The impact of 5G will be even more significant in emerging markets, such as India and Southeast Asia, where there is a steadily growing appetite for gaming. With a rise in mobile usage all over the country in India, the mobile gaming market is set to be a part of the top 5 markets in the world. In fact, India has the highest number of mobile game downloads in the world, followed by the US and Brazil.

When 5G networks are introduced to India, Brazil, and South East Asia, the improvements to connection and low latency will create a storm in the gaming world. From higher resolution games to competitive multiplayer experiences, 5G will create a sizeable appetite for titles that make the most of this new technology.
