

It has multiple mounting options, auto-light corrections, and stereo audio. It is an excellent choice for Twitch, Youtube, and Facebook.

- FOV: 78 degrees

Pros:

- It supports 720p 60 FPS streaming.
- It has a background removal feature.
- It adjusts well with low-light.

5. Razer KIYO Webcam

Razer KIYO webcam is the best plug-and-play device compatible with OBS, XSplit, and Stream Labs. There is a big ring of light to remove the shadows and maintain even lighting throughout the frame. It is an excellent choice for on-the-go streamers and content creators.

- FOV: 81.6 degrees

Pros:

- 1080p with 60 FPS.
- Tripod mount.
- Ring light for quality video.

Cons:

- No companion software.
- The quality of the microphone is average.

5 Purpose-Built Gaming Webcams

1. Logitech StreamCam

Logitech Streamcam is an ideal webcam for live streamers. It has versatile mounting options, smart auto-framing, enhanced audio performance with a full HD glass lens. It is capable of producing 360p, 720p, and 1080p for a frame rate of 30 FPS and 60 FPS. You can use OBS and XSplit with the Logitech StreamCam. Logitech Capture software is also equally good with the cam, but it lacks power for streaming and recording. OBS and XSplit are easier to install and provide more flexibility.

- FOV : 78 degrees
