Gear - Lights for Live Streaming

Great lighting can make even inexpensive gear look outstanding.

Lighting plays a significant role when creating a professional quality stream. If you are starting a live stream on YouTube, Facebook, Twitch, or any other platform, getting dedicated lighting is crucial. You can choose from softbox or desktop lighting. Softbox works to limit the light from the LED bulbs in a closed room and releases it through at least a single layer of diffusive material. They are ideal for filling in the light as they don't cast sharp shadows and save you a lot of money if you work in a small area. Desktop-based lighting is placed on the desk like a webcam or a LED ring light.
