

ring to make most of the circle light. With a 360-degree rotating smartphone holder, it can be your go-to video shooting device.

4. Marklif ring light

Marklif features 11 adjustable brightness levels to choose from to help meet all your varied requirements. It is the perfect lighting to do away with all the unrequited shadows. The LED ring is safe and comfortable, where you can customise the colour temperature and brightness levels by simply rotating the ring. It offers a 2-in-1 design, which combines a self-timer lamp and a mobile phone holder, which can be used as per your choice of self-portrait photos, video shoots, and online teaching. Boost your picture quality with three light modes for visual effects and alter the colour temperature as per indoor and outdoor shoots.

5. Fluorescent tube light and light bulbs

Yes, you heard it right. You can face a normal tube light while working on your videos. A variety of colour temperatures are now available, as fluorescents offer colour temperatures that are quite cool. They are affordable as compared to other lighting equipment. However, they would require a change more frequently due to the lumen depreciation, making it less bright than it was originally.
