

The video streaming platforms like YouTube or Twitch, have become increasingly popular. These live streaming services have also enabled millions of users to watch their favourite content or games in real-time uninterrupted. Developing high-quality live stream videos is one of the best measures to gather a million followers for your platform quickly. A good capture card will certainly help your goals. Follow through and you'll learn about the best capture cards available.

1. AVerMedia Live Gamer Portable 2 Plus

This capture card can easily capture the footage on your PC as well as on a swappable micro SD card that can easily store up to 128 GB of content. It can easily stream footage and record the content normally, which makes it highly versatile. This capture card has a built-in hardware encoder that uses the popular H.264 standard for recording. Its proprietary player is intuitive and extremely easy to use.
