

2. Elgato Game Capture HD60S

Elgato is undeniably one of the best known and widely popular capture cards on the list. These devices are easy to use, feature-rich, and they function exceptionally well. The Game Capture HD60S capture card is easy to set up; you can plug in this capture card between your console or PC and a TV. You do not require any software solution to run this capture card making it the ideal plug-and-record solution. However, you can use the software for certain features and to configure the device.

There are various reasons for which this capture card is the most preferred external capture card. It is one of the few devices that enable the users to play games at 4K 60FPS HDR quality while broadcasting and grabbing the footage at 2160p 30 FPS and 1080p 60 FPS HDR without dropping the video.

Key features

- Frame rate - 60 FPS
