AverMedia Live capture card

4. Elgato Game Capture 4K60 MK.2

The Elgato Game Capture 4K60 MK.2 is a PCIe interface based capture card. This means you can only use it with a desktop PC and not with any other platform. However, it has an HDMI input as well as an output so you can connect anything that uses an HDMI interface. Also, being a PCIe card ensures that it has plenty of bandwidth to play around. As a result you get to capture 4K 60 FPS HDR10 footage which is the highest quality that most of your audience will have access to. You must ensure that you have a fast storage medium for all the footage that the card will capture. The Elgato software allows you to stream directly and supports several templates as well.
