

- It provides scene and source transitions, a screen preview editor, and macro extensions.
- It has a video production feature that allows you the benefits of drag and drop, express video editor, chroma key, and provides support to webcams and capture cards.
- The Gamecaster gives you a range of personalised themes, and you can control the stream from a single screen.
- It also helps you to create a streaming community with a live status display.
- It safeguards your projects as all data gets stored on the cloud.

Conclusion

Those were some of the most popular livestreaming software and services. Some boast of massive libraries of plugins and extensions whereas others are more feature-rich and then there are the lean ones. Depending upon how much customisation you'd like with your live streams, there's a software for you.
