

You need to create an immersive and engaging feel for your audience. It means that you need to keep improving or improvising. Then, adapt to the new changes, and overcome the impediments to deliver a ‘wow’ feeling to the viewer. Why will the average viewer come back to watch you play the game, consistently? You have to be proactively working on growing your audience by focusing on your stream’s technical aspects and working on the non-technical factors.

As a gamer who enjoys streaming their game live, you will be motivated to showcase your best gaming skills only when you are the right people backing you, sharing their thoughts, and comments live to keep you up. So, use the right strategies to grow your live audience. What are these? Here in this chapter, we cover all this and more.

Live Stream

Using Analytics to Grow Your Audience

Every channel or platform offers analytical tools, paid and unpaid, that will help you analyse where exactly you stand. Data is important because it tells you how well or bad you are doing as it is important to measure the success or the failure of your streaming sessions to help you improve.

1. YouTube analytics

The tool helps you measure if you are any close to the goals that you have set for your channel. Remember, this is a real-time metric. The data is right there in front of you, all you need to do is filter out the information to help you get meaningful insights about your channel’s performance.

Metrics that help are:

- Subscribers
- Views received in the last 48 hours or real-time views
- Top videos, channel views
- Channel watch time
