

5. Lighting

Ring lights, LED panels or box lights are good to start with. However, if budget is an issue, you can choose to go ahead with your home lights. You can keep your set-up close to a window or the lights at home.

6. Backgrounds

For impressive backgrounds, you will need to use certain specific software programs. However, if you wish to impress and engage your viewers better, go in with the green screen background. It takes time to set-up and take-down, but it is worth all the effort.

7. Microphone

It is one of the most important elements in live streaming, especially games. For once, your audience might forgive the low video quality, but they will not be so understanding and tolerant when it comes to low audio quality. You can choose between headphones, desktop-microphone, or even off-camera microphones. Gamers often use USB microphones, which are impressive too. These are specially made for live streamers. There are also innovative microphones, for example, the tap-to-mute button on the top of the mike.

8. Taking care of the echo

Go in for rooms with curtains and carpets because the sound echo is better handled by these elements than an empty, bare space. You can use sound-proofing panels too.

9. Other hardware set-ups

It would help if you focused on hardware like gaming controllers and keyboards, which are more of your personal choice. If you need to type a lot during the game, go in for the quieter keyboards. There are keyboards built for silent operations, you can invest in the same.

10. Stream deck

It is a panel of buttons that is used by gamers to switch settings during the stream. They also help load sound effects.

There are other software tools, too, free and paid to get you started on the stream. You can also go in for a mini fan so that you are kept cool during hours of live streaming during summers. You can also choose from exten-
