

It can hence be really hard to choose a gaming service, procure the essential hardware and software, and then set up the service for streaming. You also need to ensure that all the hardware and software procured is mutually compatible - the loss of even one piece of this complex jigsaw can mean a large amount of hard work, and loss of time and money.

It is important that every gaming content creator has an understanding of the various factors that are important in learning how to stream, and setting up an effective and productive streaming infrastructure using the least amount of time and finances. This chapter allows you to gain an insight into setting up your own streaming infrastructure for the device of your choice and then using it impactfully and without any problems.

Factors and Decisions

If you are starting from scratch, there are a number of decisions and factors that need to be considered even before you start streaming. Whether you are choosing hardware or software, or even the game that you want to stream, going about it in a random fashion can be significantly detrimental to your eventual goals. Here is a list of major factors to be considered when you are starting to stream.

The quality of video game streaming depends on a large number of factors

1. Internet Connectivity:

The bare minimum and essential requirement for setting up any kind of streaming infrastructure is to have regular and high-speed internet connectivity. An internet connection is important if you want to watch live streams, but even more important if you want to create gaming content. With the
