are on a new service, you might want to take at least a few days to observe how the service curates its content, how the content is pushed to users, and the highest quality of content that is possible on the service. You want to reach the largest audience while preserving the quality of your content.

Basic Streaming Settings

Every streaming service has a bunch of settings that need to be configured the first time you start streaming. A large number of users prefer to use what is known as Open Broadcaster Software, which allows you to live-stream parts of your desktop to a number of game streaming services such as Twitch and YouTube Gaming. It is not essential to use Open Broadcaster Software, but it makes the whole task of streaming a lot easier than otherwise. Below is a walkthrough of the basic setting you will be required to assign when you first get started with streaming. The example being considered is the Streamlabs Open Broadcaster Software.

Streamlabs OBS is widely used for streaming on a variety of portals

Account Connection

Streamlabs allows you to choose from a large number of platforms. The main platforms that are compatible with Streamlabs OBS are Twitch, YouTube Gaming, and Facebook Gaming, but it allows you to connect to your account on most major game streaming platforms. The user interface of Streamlabs OBS is extremely feature-rich, so there are no issues using it on other platforms as well.
