

Streamlabs OBS will automatically detect which game you are playing and add it as a source to be streamed. You can also choose *Display Capture*, which streams your whole screen, and *Window Capture*, in which you can choose the window which you want to stream.

Alert Box

The alert box is a growing trend among gaming content creators. The alert box can be placed at a position of choice in your streaming window. It shows a constant stream of alerts related to your stream as well as your profile, and allows you to engage with your followers in real time. It also allows you to read the comments posted by your followers and to answer their questions continuously.

Streaming on Various Devices

As mentioned above, the choice of device is an important consideration when it comes to streaming. Different streaming services are compatible with different devices and consoles. Some consoles have their own exclusive streaming services and do not allow any other service to stream. On the other end of the spectrum, quite a few devices will allow just about any streaming service to help you stream, given a basic set of preconditions are fulfilled. Below is a list of the major devices and services on each device that can be used for streaming.
