

Windows

PCs are by far the most popular streaming device. This is not just because a significant number of gaming content creators own Microsoft devices. PCs are compatible with the largest number of streaming services, and it is on Windows that most of the latest streaming technology and innovation has been taking place. There are scores of platforms on Windows, on which you can stream your gaming adventures to the world. Here are the major platforms among them.

Twitch is the most popular streaming service on PC

Twitch

Twitch is the platform with the largest viewership of gaming content. It is your best bet if you think that the content you are about to create is going to be of high enough quality to attract thousands of viewers while it is being streamed, or during reruns.

To stream through Twitch, the first step is to make a Twitch account. Once you have made this account, you will be provided with a stream key, which can be used to link to your Twitch profile and stream through it. Whichever OBS you use, to connect to Twitch, you will require this stream key. Once you have entered this stream key in your OBS and connected to your Twitch profile, you will be able to stream the game you are playing through your Twitch profile using the OBS of your choice.

Facebook Gaming

Facebook Gaming is a competitor to Twitch and is the official gaming streaming service of Microsoft. It is certainly more compatible with the Windows user interface, and Windows users are likely to face significantly fewer issues when they are using Facebook Gaming to stream. However, the user base of Facebook Gaming is significantly smaller than that of Twitch. Streaming through Facebook Gaming was no longer a task than two steps. To stream through Facebook Gaming, you could press the Windows Key + G, and click on the Broadcast button to start. However, this feature has been removed in the latest updates. Facebook Gaming is also compatible
