

ticular importance for you. Do not skip it if you want to make the most of the article.

- **Streaming:** Streaming refers to the process of reproducing and uploading a combination of video and audio in real-time. These videos are usually encoded to safeguard them from hackers.
- **Encoding:** Typically, streaming requires encoding. The term itself refers to the activity of converting a raw file into a compressed version of itself that can be fathomed by only the software on the other user's end.
- **Hardware encoding:** Some software requires specially made hardware devices or parts to perform encoding, while the CPU is not enough for the process. This is known as hardware encoding. It is not so much for the programs used than it is for the devices' physical components in question.
- **Software encoding:** Software encoding is the process of utilising the CPU to perform the encoding process. The quality of software encoding is high and more rigorous for the hardware.
- **Bitrate:** Bitrate is the size of the file that is being created and is measured per second.
- **Frames-per-second (or FPS):** FPS is the number of images a computer produces per second while performing any task. Here, the mission is gaming. Usually, for console gaming, 60 FPS is the desired frame rate. The term also comes up when talking about encoding while streaming.

Streaming and console gaming PC builds

In this section of the article, we talk about the different kinds of PCs that you can assemble based on your needs as a gamer. Each PC has an independent cost that depends on the components required to build them. Here, they are listed according to a gamer's level and the amount they can invest at the moment.

Streaming build on a budget (approx. ₹45,000)

Building any PC for gaming is going to be expensive, but this build probably costs the lowest. Here are the components that you need to build the same:

- AMD RX 570 graphics card or NVIDIA GTX 1650 Super
- AMD R3 3100 CPU
- Stock CPU cooler (You will get one with the CPU)
- MSI B450M Pro-M2 Max Motherboard
- 2x 8GB Dual-channel DDR4-2666 RAM
