

- MSI B450M PRO-VDH MAX Motherboard
- 2x 8GB Dual-channel DDR4-2666 RAM
- A 500GB WD Blue NVMe SSD
- Corsair CV450 power supply
- Corsair 275R case

MSI GEFORCE GTX

The Ryzen 5 3600X CPU is a powerful choice for the big boys in the gaming industry. It has six cores and twelve threads and has enough processing power to handle AAA-video game titles. The RX 5600 XT and 1660 Super are great mid-range graphics cards which will not only help you with better visual fidelity but you can even use them for hardware encoding your streams. This puts less load on your CPU and shifts that to the GPU. You will have to balance this out for different video games. There are CPU hardware profiles in streaming software to determine how much the CPU should handle.

Streaming build for hardcore gaming (approx. ₹1,30,000)

This PC is for the hard-core gamer- probably the kind that shut themselves in a room and play for countless hours. We don't recommend doing this
