

and you should have a balanced approach to everything in life. If you tick the box and love games that require ultra-modern systems because of their heavy graphics demands, then this computer is the one to choose. You can stream and play the most advanced video games at 1080p and 1440p with this system.

Here are the components you need to assemble the beast:

- An RTX 3060 Ti graphics card
- An Intel i5-10600K CPU for a powerful gaming experience
- A Cooler Master Hyper 212 CPU cooler
- Asus Prime Z490M-Plus motherboard
- 2x 8 GB Dual-channel DDR4-3200 RAM
- A 1 TB WD Blue NVMe SSD
- Another 1 TB Crucial P1 SSD for more storage
- Corsair Vengeance 650W 80+ Silver power supply
- A Corsair SPEC-OMEGA case

The system is especially recommended with each part carefully researched for an excellent gaming experience. This PC works well for all gamers levels, especially those in it for the love of video games, not just for the thrill of it. Getting an RTX 3060 Ti might be a slight challenge but it's way more powerful than any of the current gen mid-range and high-end RTX 20-series cards.

Intel Core i5 10th Gen
