

A little heads up about the Intel i9-10900K CPU- it has ten cores and twenty threads to give you the best of both worlds, single-threaded and multi-threaded gaming experience. Also, the RTX 3080 and RX 6800 XT are some of the best graphics cards you can buy right now. Both are a little hard to come by since they've just been launched but they're certainly worth the money. And the improvement to your gaming experience is priceless.

Streaming build ultimate edition (approximately \$5800)

This is it. This is the monster, the absolute monster that you can create at home. There is no going above this PC and is the ultimate dream of a hardcore, professional gamer. This is the system that makes champions and rightfully at that. So, should you get yourself this computer for your next birthday gift? Go ahead only if you are a professional and in it for the long haul. Be warned, and this PC is not kind to your pocket or your gaming career. It takes another beast to control this, and you will be a fit for each other only if you know what you are up to in the gaming world.

Here are the components you need to build the ultimate monster of a system:

- NVIDIA RTX 3090 or AMD RX 6900 XT graphics card
- AMD Threadripper 3960X CPU
- A Corsair H115i Pro CPU cooler that will require a TR4 Mounting Bracket
- The Asus Prime TRX40-PRO motherboard
- 4x 16GB Quad-channel DDR4-3600 RAM
- 2TB Samsung NVMe SSD
- 4TB Crucial P1 NVMe SSD additional storage
- Antec HCP1000 80+ Platinum power supply
- Cooler Master Cosmos C700M case

NVMe SSDs can really speed things up
