

A typical PC Gaming setup

Let us talk a little about the components then. The CPU is potent with twenty-four cores and forty-eight threads! You can stop using the graphics card for encoding and use x264 software encoding which uses the CPU but provides the best quality. You can do this and still have unused cores after gaming!

Let us also tell you about the cooling system. Imagine overclocking your CPU, and massively so, while keeping it quiet and not lending one tiny dent to your system! Additionally, the power supply recommended here is one of

Twin PC Setup
